
(a) Total cost sensitivity | FR, 1× load, 1 replica
Baseline (1500, 175 W)
Idle power per GPU (W)
Shared equipment power (W)
Change from baseline (%)
(b) Incremental cost of scaling | FR, 2× load
Baseline (1500, 175 W)
All differences > 0: scaling always costs more
Additional cost: 2 − 1 replica (EUR / 1000 req.)
